

SYSTEM, METHOD, AND COMPUTER-READABLE MEDIUM FOR ANALYZING AN
MPEG-FORMATTED FILE

ABSTRACT

A system for analyzing a moving pictures expert group (MPEG)-formatted file comprises a format analysis application and a processing element operable to execute the application. The application is adapted to read a rule having at least one logical instruction defining a format requirement and compare a portion of the file with the rule. A determination of validity of the file is made by the application dependent upon a result of the comparison.
